A Handy Guide to PC Upgrading!
By A Customer
   The growth of the computer industry has been phenomenal. New computers are being designed and built every day. Thousands of computers leave factories around the world every day to be delivered to retail stores, homes, and businesses. Every day it seems that new technologies are being developed and made available to enhance the performance of our machines. New computer processing units (CPU's), memory chips, hard drives, modems, and storage devices lead the way in improvements being made.
   Have you considered upgrading your current system? Ever wonder how to upgrade it? Do you have the

skill and patience necessary to do the work yourself? Should you pay someone else to do it? Should you dump it altogether for a new one? Are these and other questions running through your mind? If so, read on!

Galen Grimes has written the 10 Minute Guide to PC Upgrades to offer valuable insight and help to assist his readers to upgrade their own PC's. This compact 200-page ! guide offers good detail about the art & science of upgrading PC's. Actual hands-on photographs demonstrate how to install CPU's, memory chips, sound cards, modems, SCSI cards, hard drives, internal diskette and tape drives, Zip drives, and a host of peripherals. Emphasis is placed upon installing device cables correctly. Beyond simple installation instructions the author offers brief but helpful information about each device, including how they work and how to select the right ones to meet your computing needs!

This handy book is easy to read and follow. This book would make a great textbook for a beginner's computer class. It would also make an excellent companion to someone's first computer system! Readers can begin at the front of the book (recommended), or simply thumb through the rest of the book to find the specific instructions they need.

Before spending big bucks to buy a new computer system consider upgrading your current one. You may be a bit surpr! ised at the savings of money and improved performance your ! current system could provide. Go for it!
