The three main reasons for this are medical effectiveness, cost effectiveness and the credibility that clinical trials and physiological research have provided. Acupuncture is rapidly moving out of the arena of "alternative" medicine, in large part again because it is grounded more firmly than other alternative treatments in research. The book provides the reader with the up-to-date information on the clinical bases of acupuncture.

For acupuncturists

By Billy A.

This should be a must read for every acupuncture student near graduation. The front part it's a slow read, highly technical if you aren't a neurologist, but still worth getting through. It has a few good tidbits that will be used in my practice, but especially it gives context to what kinds of research is being done and why.

The Science of Acupuncture

By Anthony F. Jahn

This is a useful adjunct to the pocket text by Stux and Pomerantz, but does not stand alone as a text for acupuncture. I would recommend it as a secondary text for those who already have one of the standard clinical texts, such as Deadman or Macciocia.
